No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US2002042926A1

GRENEAL INFORMATION:

APPLICANT: Martin

APPLICANT: Ren, Yongsheng

APPLICANT: Wh. Yongsheng

TITILE OF INVENTION: OVARY SPECIFIC GENES AND PROTEINS

TITLE OF INVENTION: OVARY SPECIFIC GENES AND PROTEINS

TITLE NOT APPLICATION NUMBER: US/09/844,864

CURRENT APPLICATION NUMBER: 60/106,020

PRIOR APPLICATION NUMBER: 60/106,020

PRIOR APPLICATION NUMBER: PCT/US99/25209

PRIOR FILING DATE: 1998-10-28

PRIOR FILING DATE: 1998-10-28

NUMBER OF SEQ ID NOS: 25

SOFUWARE: Patentin Version 3.0

SEQ ID NO 25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APPLICANT: Matzik, Martin

/note="Vector: pT713D=Pac (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Bco R!; The NIH BMAP M S4 library is a subtracted library of a series, ultimately derived from a mixture of individually tagged normalized libraries from a mixture of individually tagged normalized libraries from ten regions of the mouse brain (cerebellum, brain stems, olfactory bulbs, hypothalamus, cortex, amygdala, basal ganglia, pineal gland, striatum, hipoccampus) after a series of subtracted libraries representation of cDNAs from which ESTs had already been generated in this process: NIH BMAP M S4; NIH BMAP M S3.1, NIH BMAP M S3.1, NIH BMAP M S3.2, and NIH BMAP M S3.2, NIH BMAP M S3.2, and NIH BMAP M S3.2, and NIH BMAP M S3.2, and NIH BMAP M S3.3, NIH BMAP M S3.2, and NIH BMAP M S3.3, NIH BMAP M S3.3, and Libraries in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography into DH10R harteria (in the form of single-stranded circles contacted library)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             into DH10B bacteria (LifeTechnologies) to generate the NIH BMAP M S4 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research

CDNA Library Preparation: M.B. Soares Lab Clone distribution:
Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS.
Should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CGCGAGGAAAGCGGTCCCCCAGCCGCGAAGCGAGGAGGCGATGTTCAGGCTGCAGGGCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NoII site and the oligo-dT track served to identify it as a clone from the normalized basal ganglia library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made determined the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, the record will be updated accordingly when that means is determined.

Oligo-dT track not found, Not I site shown in beginning of sequence
is likely internal to the message. cDNA Library Preparation: M.B.
Soares Lab Clone distribution: Researchers may obtain BMAP cDNA
clones from RESEARCH GENETICS. It should be noted that Bento Soares
is generating a small number of additional specialized
non-redundant arrays of BMAP cDNAs whose availability will be
considered under appropriate and limited collaborative arrangements
